

CODEDEVILS  
WELCOME!

## IN THIS ISSUE

### PG. 2

Get involved in the software community.

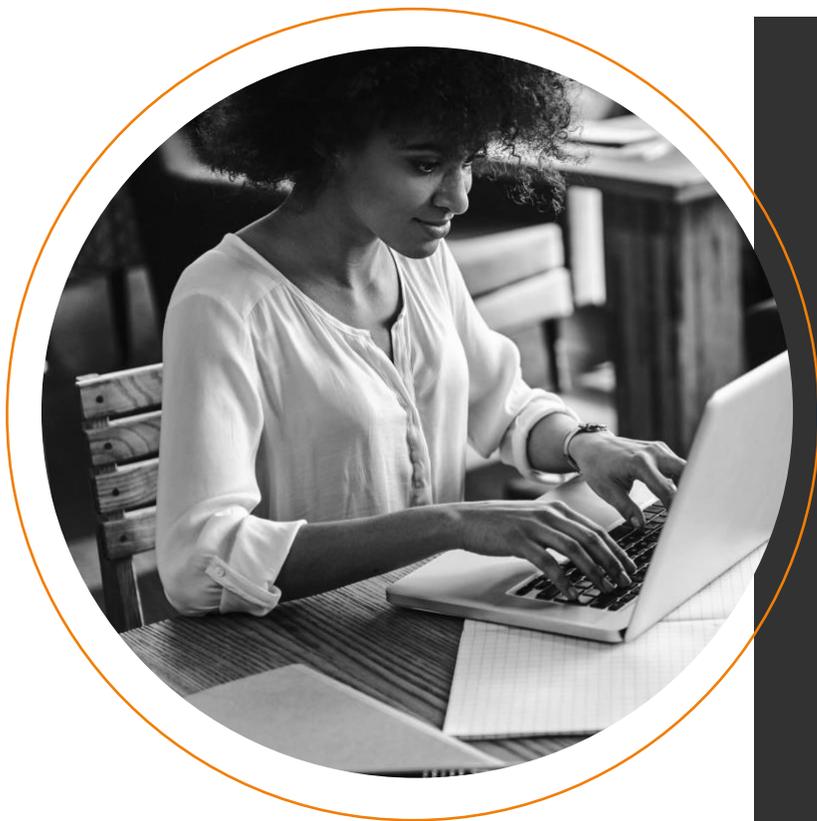

### PG. 3

Organize, design, and collaborate on CodeDevils-sponsored projects.

### PG. 4

Hone your programming skills in coding competitions.

Links/Resources

## GET INVOLVED

There are plenty of opportunities for you to get involved at CodeDevs.

**Attend Bi-weekly Meetings** – CodeDevs holds meetings every other Monday to catch members up on the latest and greatest at CodeDevs. This is your opportunity to not only learn about CodeDevs, but to ask Officers and fellow members questions.

Bi-weekly meetings are held on our [Slack channel](#), which can also be used by members with approval.

**Get Started on a Project** – See the projects section below to find out how to start on one of our many projects.

**Become an Officer** – We have a variety of roles, including President, Treasurer, Project/Events Coordinator, Webmasters, and more! *We are currently looking for underclassmen to fill these roles*, so reach out to one of us below to find out more!

**Network with Fellow Students** – Engage with students on [Slack](#) and begin to make lifelong connections with the future of the software industry.

## JOIN THE COMMUNITY

We have a large community of students on [Slack](#) who are just as excited as you are to get started in their professional career. Go to our Slack channels like [#jobpostings](#) for heads up on internships, find your courses slack channel to organize study groups and ask questions, or just channel your inner meme lord in [#random](#). It's up to you! (Just make sure to keep it relevant!).

You can keep an eye out on the [#announcements](#) channel for information on upcoming events, our regularly scheduled meetings, and guest speakers from our sponsors!

Speaking of sponsors, did you know CodeDevs is partnering with big software companies like **Lyft** and **DreamHost**? Post on Slack to find out how to get ahead of the game and start working with one of our sponsors!

## PROJECTS

Courses provided at ASU are key to your success and often apply to the real world, but your interests might not match everyone else's. Projects give you a chance to develop skills in multiple disciplines and give the flexibility of letting you choose the right one for you.

You can join one of our on-going projects! We have a few out there right now, and plenty more coming down the pike, so we would love your involvement. We welcome everyone from first-time programmers to professional developers. Post on the *#projectdiscussion* channel on Slack to learn more. You can also find our existing projects on GitHub.

Do you have a project you want to propose? Creating a project is a great way to both program something you're interested in and finding fellow students who want to join you! Follow the steps on the [Project Proposal Guide book](#), and fill out [the request form](#) when you're ready to start hacking!

“Giving the tools  
students need to  
be competitive in  
the software  
industry”

## CODING COMPETITIONS

Whenever we get the chance, CodeDevils hosts coding competitions on platforms such as *HackerRank*, *CodeRocket*, and *HackerEarth*. These competitions vary in complexity and are often accompanied by prizes! Plus, who doesn't want bragging rights?

We use these third-party hosts as opposed to making our own because many of the world's largest software giants, such as Google, Facebook, and Lyft, use them to hire their own employees! Engaging in these competitions not only allows you to compete head-to-head against fellow students, but it also builds up your profile and exposes you to these industry leaders.
